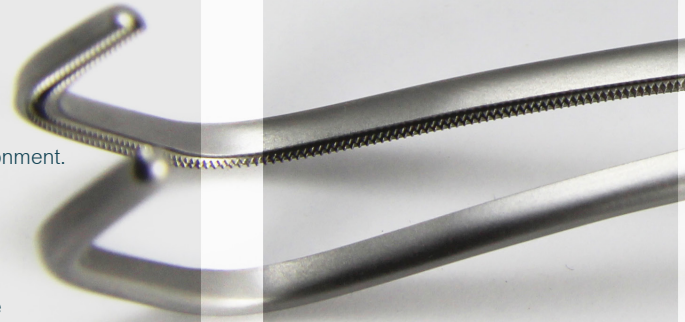
INTRODUCTION

We move in markets that each time are more competitive, complex and leave less room for errors which requires us to confront the future with new perspectives.

At SURGIWELL we are conscious of the effort needed to approach these new times and are absolutely convinced that innovation is a pillar which strengthens a company's growth.

With more than 30 years of tradition in the production of instruments and with thousands of health professionals having confided in us, at SURGIWELL we have been incorporating the latest advances in design and production techniques. However, none of this is useful unless the new technology is accompanied by knowledge and experience. The instruments that leave our production are a result of techniques which combine the latest technology and precision work from our master craftsman.

The result, high quality instruments which are intended to stand the test of time, at a very competitive price.



But innovation is not only applying new forms of production or investing in technology. Innovation is a much broader concept which obligates us to be in constant contact with the market, offering solutions for the needs and concerns which arise in the medical environment.

With the aim of expanding our service, we offer an efficient after sales instruments repair service incorporating new instruments identification solutions and we are in the process of developing new products through SURGIWELL, our company in charge of I + D + i.

In this new stage of SURGIWELL, client orientation is the foundation of our future plans: we pursue excellence as a means to obtain total satisfaction from the medical professionals who use the instruments labelled SURGIWELL.

But this is only the beginning…

HISTORY

Over the past 30 years, the accumulation of experience and knowledge are our best credentials and this allows us to continue contributing high level products to the health market.

Since 1982, we have been producing surgical instruments, in 2011 the company opened it sales and distribution in world centre of medical technology valley, TUTTLINGEN.

Today we continue to produce and commercialize surgical instruments under the name of SURGIWELL, achieving higher quality levels, thanks to the initiative of a new management team and a work staff of highly qualified professionals.

TRAJECTORY

Throughout our history, we have been introducing new products and services with a marked orientation toward the client. We have not only specialized ourselves in production of instruments, but the profound knowledge of our technicians and craftsman have led us to offer personalized solutions for specific instruments and a complete after sales service including maintenance and instrument repair upon request.

TEAM

At SURGIWELL we offer the best solution for every necessity, which makes us much more than just a supplier of high precision instruments: We are a team that listens to our clients and adds value to every challenge.

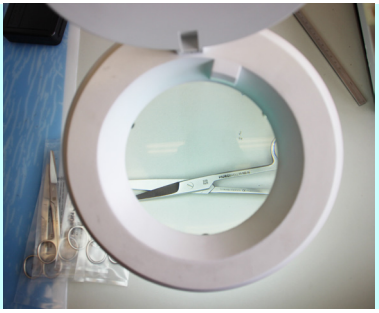
MARKET

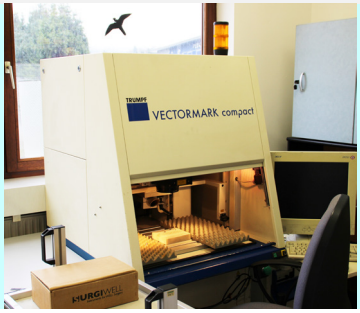
Collaboration with the client is one of our highest priorities. A profound understanding of the problems and necessities found in the medical sector motivates us to be in permanent contact with the market and constantly developing and improving our products and services.

QUALITY

Our company works under a quality assurance system completely integrated in the company's daily activity.
All our products pass through numerous control checks up until they reach the final inspection.

SURGIWELL, complies with the quality regulation DIN ISO 9001:2008 and EN ISO 13485 : 2012 + AC : 2012, along with the guideline 93/42/EWG.
All our instruments carry the CE label.





PRODUCTION

Our standard catalogues contains a complete range of surgical instruments with more than 7.500 different references for all types of applications.

The Quality of our production procedures is guaranteed by the use of first class German steel and following a work methodology which uses the most modern technologies. This allows us to form components of high complexity, in order to respond to market demands with greater efficiency and effectiveness.

Our ranges of product group are continuously evolving and are presently:

I + D + i

As part of an alliance with our technical partners, we collaborate with clinical and medical professionals and assist in the designing of new customized products and developing improvements in parallel with the evolution of surgical techniques.

Our network in Tuttlingen (Germany) of technical designers and medical collaborators work to offer better technical and economical products. Effectiveness and efficiency to optimize the work performance in the operating room.

DESIGN AND DEVELOPMENT OF “CUSTOM” INSTRUMENTS FOR SPECIFIC TECHNIQUES.

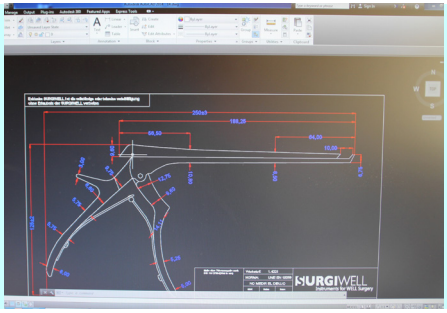
Every medical professional is unique and every surgical technique requires highly specialized instruments. At SURGIWELL we are conscious that it is important to have working relations with prestigious doctors and because of this we rely on some of the most prestigious project developers in the sector.

The result, specific instruments, adapted to the uniqueness of each case and each personal technique.

DEVELOPMENT OF TECHNICAL IMPROVEMENTS IN SURGICAL INSTRUMENTS AND NEW PRODUCTS.

Surgical techniques constantly evolve and in occasions it is necessary to adapt instruments to new forms of work.

That’s why at Surgiwell, in collaboration with our international partners and through Surgiwell innobe, have created a department for the study and improvement of existing surgical instruments.



RESULTS

A job well done generates benefits. At Surgiwell, we can state with pride that we are leading company producing surgical instruments and our quality is recognized world wide.

The instruments produced at Surgiwell are present in medical centres and hospitals world wide, instruments that do not lose their value as time passes by.

FUTURE

INNOVATION is a fundamental pillar which SURGIWELL bases its future on and also as an instrument for constant improvement from every aspect of the world. Innovation in technology, Innovation in people, Innovation in procedures… looking for synergy in the integral flow between us and the market.

The search for excellence is what we continuously work for at SURGIWELL. This excellence in turn provides better results for our clients.

Die Parametriumscheren gewährleisten einen sauberen Schnitt des Bindegewebes seitlich der Gebärmutter. Sie sind in ihrer Form und Biegung den Parametriumklemmen angepasst!

The parametrium scissors guarantee a perfect cut of the tissue lateral to the uterus.
The form and bend is relevant to the parametrium forceps.

Las tijeras parametrium garantizan un corte mejorable del tejido conjuntiva lateral del tero.
Las tijeras son adecuada a las pinzas parametrium con respecto a su forma y curvatura.

Les ciseaux à ligements larges garantissent une coupe nette du tissu conjonctif latéral de l’utérus.
Elles sont adaptées dans leurs formes et courbures aux pinces-clamps pour ligaments larges!

Le forbici Parametrium consentono un taglio netto del tessuto connettivo laterale dell’utero.
Grazie alla loro forma e curvatura si adattano alle pinze Parametrium.

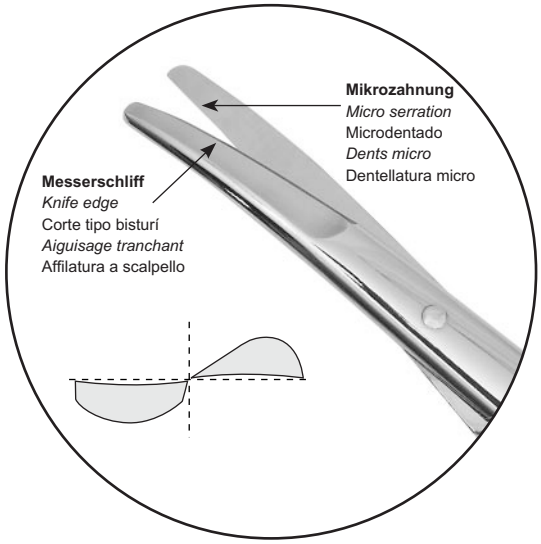
SUPERCUT Forbici con affilatura a scalpello e dentellatura micro



Bei SUPERCUT Scheren hat ein Scherenblatt die Schneidegeometrie eines Messers, was auch bei grobem Gewebe einen mühelosen, messerartigen Schnitt ermöglicht.

Durch den Messerschliff wird auch die Quetschwirkung und damit die Traumatisierung des Gewebes wesentlich vermindert.

Die Mikrozahnung am anderen Scherenblatt verhindert das Abgleiten oder Wegschieben des Schnittgutes.

Eine Verwechslung mit herkömmlichen Scheren ist durch die schwarze Kennzeichnung der Ringgriffe ausgeschlossen.

Scissors with SUPERCUT have one razor blade which allows an easy and clean cut even through thick tissue.

The razor cutting edge reduces the squeezing and traumatic effect at the tissue.

The micro serration at the opposite blade prevents sliding of the tissue.

A mix-up with regular scissors is almost impossible due to the black identification of the ring handles.

Une des lames du ciseau SUPERCUT a la géométrie tranchante d'un couteau ce qui permet de couper tous les tissus, même les plus épais, de façon aisée et nette.

La lame couteau permet de réduire considérablement l'écrasement et le traumatisme des tissus.

La denture micro de l'autre lame évite que le tissu coupé glisse ou soit repoussé.

Aucune confusion avec des ciseaux conventionnels n'est possible, grâce au marquage par les anneaux noirs.

Las tijeras SUPERCUT tienen una hoja geométrica cortante, lo que posibilita un corte liso y sin esfuerzo en el tejido grueso.

El corte tipo bisturí impide traumatizar el tejido considerablemente.

El microdentado opuesto a la hoja lisa disminuye el deslizamiento y empujamiento del tejido.

El marcaje negro sobre el instrumento, impide una equivocación con otros instrumentos convencionales.

Le forbici SUPERCUT hanno una lama con sezione a coltello. Questo rende facile anche il taglio del tessuto meno delicato.

Questa caratteristica riduce la pressione di taglio e di conseguenza la traumatizzazione del tessuto.

La microdentellatura nell'altra lama garantisce una presa sicura del tessuto da tagliare.

La particolaritá degli anelli neri evita di confonderle con le forbici tradizionali.

Mit der atraumatischen Riefung am vorderen Maulende wird feines Gewebe schonend und sicher gefaßt, während mit den dahinterliegenden Hartmetalleinlagen eine Wundnadel sicher gehalten werden kann.

With the atraumatic jaws at the tips, fine tissues are hold gently and in a secure way. The tungsten carbide inserts provide safe gripping of needle.

Con la estriadura atraumatica en la parte delantera de la boca, se sujeta cuidadoso y seguro tejido fino, mientras que con las capas intermedias de carburo tungsteno detrás se puede sujetar seguro una aguja.

Avec la striure atraumatique à l'extrémité des mors, les tissus fins sont saisis d'une manière délicate et ferme. Les mors en tungstène assurent une très bonne tenue de l'aiguille.

La pinza si presenta con una scanalatura atraumatica all'estremità anteriore. Ha la capacità di afferrare un tessuto in modo delicato e sicuro ed inoltre le sue estremità a morsi in carburo di tungsteno consentono di tenere fermo un ago da sutura.

Durch die atraumatische Längsriefung und den feinen Zähnchen am distalen Ende der Maulteile garantieren die Parametriumklemmen einen festen Halt des Gebärmutter-Bindegewebes.

The parametrium forceps assure a strong grip of the uterine tissue in consequence of the atraumatic longitudal serration of the jaws.

Las pinzas parametrium garantizan a través de la acanaladura longitudinal atraum□tica y los dientes muy fino al "fin distal” de la boca una consistencia estable del tejido conjuntiva del □tero.

Les pinces-clamps pour ligaments larges garantissent une tenue ferme du tissu conjonctif de l’utérus grâce à la striure longitudinale atraumatique et grâce aux dents fines de la partie distale des mors.

Grazie alla scanalatura longitudinale e i dentini delicati nella parte distale del morso, le pinze Parametrium garantiscono una presa sicura del tessuto connettivo dell’utero.

Hartmetalleinlagen mit präzis gearbeitetem Pyramidenprofil garantieren einen sicheren Halt der Nadel.

Gebrochene Kanten verhindern ein Verfangen des Nahtmaterials.

Leichtgängige Sperre ermöglicht eine sichere Arbeitsweise.

Vergoldete Griffe als leichte Kennzeichnung.

Tungsten carbide inserts with precisely worked out structure guarantee to grip the needle securely.

Bevelled edges to prevent catching of suture material.

Soft working catch provides safe handling.
Gold-plated handles for easy identification.

Capas intermedias de carburo tungsteno con pérfil amoldado piramidial que garantiza un sujeto seguro de la aguja.

Bordes quebrados evitan que se enredare el material de sutura.

El cierre suave facilita un manejo seguro.
Identificación: Mangos dorados.

Les inserts en carbure de tungstène avec structure pyramidale usinée avec précision garantissent un maintien sûr de l'aiguille.

Les bords carrés empêchent le matériel de suture de s'embrouiller.

Un blocage souple permet de travailler de manière sûre.

Les branches plaquées or, un signe distinctif éloquent

Inserti in carburo di tungsteno che garantiscono una perfetta tenuta dell'ago

I bordi squadrati evitano che si impigliano i fili di sutura

Il bloccaggio leggero e preciso facilita un uso sicuro

L'impugnatura dorata permette una facile identificazione

Je nach Anwendungsgebiet stehen für Nadelhalter unterschiedliche Hartmetalleinlagen zur Verfügung:

Die oscillierende Gipssäge wird mit 2 rostfreien Sägeblättern ø 50 + 65 mm (21-270-50 + 21-270-65) sowie 2 Schraubenschlüssel (21-270-01), zum Auswechseln der Sägeblätter geliefert. Als Sonderzubehör für Hartverbände (z. B. Glasfiber etc.) sind 2 spezialgehärtete Sägeblätter ø 50 + 65 mm (21-271-50 + 21-271-65) lieferbar. Es sollten keine ungepolsterten Gipsverbände aufgeschnitten werden, da durch Mitschwingen der angeklebten Haut am Gips Verletzungsgefahr für die Haut besteht. Für die Normalbenutzung sollte das kleine Sägeblatt mit ø 50 mm verwendet werden. Das große Sägeblatt mit ø 65 mm nur in Ausnahmefällen (z. B. bei dickem Gips etc.) verwenden. Das Gerät ist wartungsfrei, sollte jedoch alle 1 bis 2 Jahre vom Hersteller überprüft werden. Die Gipssäge ist mit einem Sicherheitsschutz-Schalter ausgerüstet. Dieser gewährleistet eine Überbelastung des Motors. Sollte durch Überbelastung die Gipssäge aussetzen, kann diese innerhalb weniger Minuten mittels eines Spezial-Einschalt-Knopfes wieder in Betrieb genommen werden. Dieser Einschalt-Knopf befindet sich unterhalb der Motor-Kabelzuführung. Um eine zu hohe Erwärmung zu vermeiden, empfehlen wir stumpfe und abgenützte Sägeblätter auszuwechseln. Zur Auswechslung abgenützter Sägeblätter sollten ausschließlich die mitgelieferten Schraubenschlüssel verwendet werden. Sie vermeiden dadurch ein Überdrehen des Extenters. In regelmäßigen Abständen sollte das rostfreie Kühl-Draht-Gitter gereinigt werden. In explosionsgefährdeten Bereichen darf die Gipssäge nicht verwendet werden. Technische Daten: Leistungsaufnahme 90 Watt • Schutzklasse II nach VDE 0740 • Schutzisoliert • Funkentstört • Motorenschutzschalter • Gewicht 1500 g

.

The oscillating plaster-saw is supplied with 2 stainless steel sawblades with diameters of 50 + 65 mm (21-270-50 + 21-270-65) plus 2 spanners (21-270-01) to exchange the sawblades. As a special requisite for hard bandage (e. g. glass-fibre etc.) 2 specially hardened sawblades diameters 50 + 65 mm (21-271-50 + 21-271-65) are available. Normally, the small sawblade with diameter 50 mm is used. The large sawblade with diameter 65 mm is used in exceptional cases (e.g. by thick plaster etc.). The unit is maintenance-free, but should however be checked every 1 to 2 years by the manufacturers. The plaster-saw is equipped with a safety-protective switch. This guarantees the motor against overloading. Should the plaster-saw become unfunctionable due to overloading the unit can be put into use again within minutes by use of a special switch-on button. The switch-on button is located underneath the motor-cable inlet. To prevent excessive heating we recommend rechanging of blunt and used sawblades. Replacement of used sawblades should only be undertaken with the use of the supplied spanners. This will prevent over-winding. The stainless steel cool-element-grid should be cleaned at regular intervals. The plaster-saw should not be used in explosive danger areas. Technical Data: Input 90 watt • Protection class II acc. to VDE 0740 • Protective insulated • Anti-signal interference • Motor-safety switch • Weight 1500 g.

La sierra oscilatoria para escayolas se entrega con dos hojas ø 50 + 65 mm (21-270-50 + 21-270-65) para serrar y con dos llaves de tuerca especiales (21-270-01) para cambiar las hojas de sierra. Para serrar objetos o escayolas de gran resistencia, como fibra de vidrio, disponemos de dos hojas de sierra especialmente templadas ø 50 + 65 mm (21-271-50 + 21-271-65). No se debe nunca serrar ningúna escayola sin haber sido antes debidamente protegida, pues por la vibración, podrían ocasionarse heridas en la piel pegada a la escayola. Para el uso corriente se emplea la hoja de sierra de ø 50 mm. La hoja de ø 65 mm se usa en casos excepcionales, p.e. cuando la escayola es demasiada gruesa etc.. La sierra oscilante, no exige ningún cuidado especial; debe ser, sin embargo, controlada por el constructor cada año o dos. Esta equipada con un interruptor de segruidad. Dicho interruptor evita el recalentamiento excesivo del motor. En el caso que, por recalentamiento excesivo, se pararse el motor, éste podria ser puesto nuevamente en funcción dentro de pocos minuntos, articulando un interruptor especial que se encuentra junto a la salida del cable del motor. Para evitar que se recaliente, se aconseja cambiar las hojas de sierra que no estén en buen estado. Para cambiar las hojas de sierra usadas, debe emplearse únicamente la llave especial que acompaña la sierra. De vez en cuando debe limpiarse la rejilla inoxidable de refrigeración. En lugares, en los cuales exista peligro de explosión, no debe ser empleada dicha sierra. Datos técnicos: Potencia de desarrollo 90 W. • clase de protección II según VDE 0740 • protegida con capa aislante • protegida contra interferencias • interruptor protector para el motor • peso 1500 g.

La scie à plâtre oscillante est livrée avec deux lames inoxydables de 50 et 65 mm de ø (21-270-50 et 21-270-65) ainsi que deux clés à écrous pour changer les lames. En accessoire spécial pour plâtres durs (par ex. fibres de verre etc.), 2 lames de scie en acier trempé spécial de 50 et 65 mm de ø (21-271-50 et 21-271-65) sont disponibles. Ne pas couper de plâtres non rembourrés; en effet, la covribration de la peau collée au plâtre entraîne un risque de blessure de la peau. Pour l'emploi normal, utiliser la petite lame de scie de 50 mm de ø. N'utiliser la grande lame de scie de 65 mm de ø que dans les cas exceptionnels (par ex. pour des plâtres épais etc.). L'appareil ne demande pas d'entretien, il doit cependant être vérifié par le fabricant tous les 1 à 2 ans. La scie à plâtre est équipée d'un disjoncteur de sécurité. Ce dernier protège le moteur contre la surcharge. Si la scie disjoncte en raison d'une surcharge, elle peut être remise en service au bout de quelques minutes à l'aide d'un bouton spécial de mise en circuit. Ce bouton de mise en circuit se trouve au-dessous du passage du câble du moteur. Afin d'éviter un trop fort échauffement, nous conseillons de remplacer les lames de scie émoussées et usagées. Pour changer les lames de scie usagées, utiliser exclusivement les clés à écrous livrées avec la scie. Vous éviterez ainsi de fausser le dispositif de serrage. Nettoyer à intervalles réguliers la grille métallique inoxydable de refroidissement. Ne pas utiliser la scie à plâtre dans les zones de danger d'explosion. Caractéristiques techniques: puissance absorbée 90 Watt • Catégorie II de protection selon VDE 0740 • Double isolation • Antiparasitée • Disjoncteur-protecteur • Poids 1500 g.

La sega oscillante è corredata con 2 lame in acciaio inox ø 50 e 65 mm. (21-270-50 e 21-270-65) più 2 chiavi (21-270-01) per il cambio delle lame. Quale speciale requisito per bendaggi duri (vetro, fibre, ecc.) sono disponibili 2 lame particolarmente indurite del ø 50 e 65 mm. (21-271-50 e 43-0359). Normalmente viene impiegata la lama piccola da 50 mm.. La lama grande da 65 mm. viene impiegata in casi eccezionali (gesso spesso, ecc.). L'unità non necessita di manutenzione ma deve essere controllata dalla casa madre ogni 1 o 2 anni. La sega oscillante è munita di interruttore di sicurezza di protezione. Questo protegge il motore dai sovraccarichi. Qualora la sega oscillante fosse inutilizzabile per sovraccarico, l'unità potrà essere rimessa in funzione in pochi minuti attraverso uno speciale bottone situato nella parte inferiore dell'avvolgimento interno. Per prevenire eccessivi surriscaldamenti raccomandiamo di sostituire le lame troppo usate. La sostituzione delle lame deve essere effettuata impiegando esclusivamente le chiavi in dotazione al fine di prevenire sovrapressioni. La griglia di raffreddamento in acciaio inox deve essere pulita ad intervalli regolari. La sega oscillante non deve essere impiegata in aree con pericoli di esplosione. *Dati tecnici:* potenza 90 Watt. • classe di protezione II secondo le norme VDE 0740 • isolamento di protezione • protezione contro le interferenze • interruttore di protezione sul motore • peso 1500 gr.

Bleihände. Durch Umbiegen der Lappen werden Hand und Finger in Operationslage festgehalten und durch das Gewicht der Bleihand zusätzlich immobilisiert.

Lead hands. Hand and fingers are secured by bending the lateral fixation process and further fixed by weight of lead hand.

Manos de plomo. Doblando los lóbulos se sujeta la mano y los dedos en posición para operar, y se queda también inmovible por el peso de la mano de plomo.

Mains de plomb. En plaint les lambeaux, la main et les doigts sont fixés en position d'opération et immobilisés grâce au poids de la main en plomb.

Mano di piombo. Legando i lobi, la mano e le dita si assestano in posizione da poter operare grazie al peso della mano di piombo.

Die Spezialklemme ermöglicht ein den anatomischen Verhältnissen angepaßtes Anlegen an der Vena cava inferior oberhalb der Leber. Die Verriegelung am oberen Ende des Maules hält nach dem Anlegen der Klemme die Maulteile fest zusammen und verhindert somit ein Ausschlüpfen der mit dem Zwerchfell abgeklemmten Vena cava inferior.

The special clamp makes it possible to clamp the vena cava inferior above the liver according to the anatomic conditions. The lock at the upper end of the jaws fixes firmly the parts of the jaws of the clamp after it is placed, thus impeding the vena cava inferior - clamped together with diaphragm - from slipping out.

Se facilita la colocación amoldada de la vena cava inferior sobre el hígado, por causa de la forma anatomica de la pinza clamp especial. El cierre a la punta de la mandibula sujeta firmamente la pinza clamp y evita que se escape la vena cava inferior con el diafragma.

Le clamp spécial permet un clampage atraumatique de la Veine Cave inférieure au-dessus du foie, adapté aux conditions anatomiques. L'anneau terminal permet de maintenir les mors joints évitant ainsi le glissement de la Veine Cave supérieure clampée avec le diaphragme.

La pinza permette di clampare la Vena Cava inferiore sopra il fegato data la sua forma anatomica. Il fermo nella parte superiore blocca saldamente le estremità della pinza impedendo che la Vena Cava inferiore scivoli via.

Set of vertebral biopsy instruments, complete, consisting of:
24-900-01 *1 Sterilizing case of 18/8 nickel chromium steel, with mounts for labels and long-life fabric filter in the base, silicone strips in lid for fixation of instruments*
24-900-02 *1 Sterilizing tray with silicone bed (the recesses are of the same width as the individual instruments) and bracket for a handle*
24-900-03 *1 Trocar cannula with centimetre scale diam. 5 mm x 100 mm*
24-900-04 *1 Semi-blunt trocar diam. 4 mm x 190 mm*
24-900-05 *1 Trephine for bone, with serrated cutting edge diam. 4 mm x 190 mm*
24-900-06 *1 Trephine for soft tissue, with smooth cutting edge diam. 4 mm x 190 mm*
24-900-07 *1 Handle with spherical quick-release mechanism for inserting and withdrawing the trephines*
24-900-08 *1 Double-ended retractor for extracting soft tissue diam. 2.5 mm x 210 mm*
24-900-09 *1 Blunt obturator for ejecting tissue samples diam. 2.5 mm x 210 mm*

Juego para la biopsía vertebral, completo, compuesto de:
24-900-01 1 Caja de esterilización de acero 18/8, con porta-placas de identificación y con filtro de tejido de larga duración al fondo, tapa con tira de silicona para fijar los instrumentos
24-900-02 1 Dispositivo de esterilización con armadura de silicona para sujetrar los instrumentos, sujetador con mango
24-900-03 1 Cánula de trocar con escala graduada en centímetros, ø 5 mm x 100 mm
24-900-04 1 Trocar semi-romo, ø 4 mm x 190 mm
24-900-05 1 Trépano de punción para huesos, con filo dentado, ø 4 mm x 190 mm
24-900-06 1 Trépano de punción para tejido blando, con filo liso, ø 4 mm x 190 mm
24-900-07 1 Mango con cierre esférico rápido para introducir y extraer los trépanos de punción
24-900-08 1 Doble-garra para extraer tejido blando, ø 2,5 mm x 210 mm
24-900-09 1 Obturador para sacar pruebas de tejido, ø 2,5 mm x 210 mm

Set pour la biopsie vertébrale, complet, composé de:
24-900-01 *1 Bo˜te de stérilisation d'acier chrome 18/8, avec supports pour des plâques d'identification et avec des filtres de longue durée au fond, convercle avec des bandes en silicone pour fixer les instruments*
24-900-02 *1 Cadre de stérilisation avec bandes en silicone - avec mesures ajustées aux dimensions des instruments, et avec support pour le manche*
24-900-03 *1 Canule de trocart graduée en cm, ø 5 mm x 100 mm*
24-900-04 *1 Trocart semi-mou, ø 4 mm x 190 mm*
24-900-05 *1 Tréphine de ponction pour os, avec tranchant dentellé, ø 4 mm x 190 mm*
24-900-06 *1 Tréphine de ponction pour tissu mou, avec tranchant lisse, ø 4 mm x 190 mm*
24-900-07 *1 Manche avec mécanism à billes pour introduire et enlever les tréphines de ponction*
24-900-08 *1 Double griffe pour extraction des tissus moux, ø 2,5 mm x 210 mm*
24-900-09 *1 Obturateur mou pour pousser les échantillons de tissu, ø 2,5 mm x 210 mm*

- **das einfache und schnelle auf- und Zusammenklappen des Schafts ermöglicht eine optimale Reinigung und senkt dadurch die gefahr einer Infektion. dieses neuartige Klappsystem verhindert im gegensatz zu zerlegbaren Knochenstanzen einen Verlust oder ein Verwechseln von Instrumententeilen.**

- *The easy and fast opening and closing of the shaft allow the best possible cleaning and therefore it reduces the risk of infection. This new design semi-detachable system makes it easier to disassemble a d re-assemble as there are no removable parts which can be misplaced or lost.*

- la apertura y cierre facil y rápido del vástago posibilita una limpieza optimal y por lo tanto lo reduce el riesgo de una infección. El nuevo sistema abatible evita una pérdida o confusión de partes entre instrumental semejante de pinzas cortantes para huesos desmontables.

- *l'ouverture et fermeture simple et rapide de la tige permettent un ne toyage optimal et réduisent, par conséquent, le danger d'une infection. Ce nouveau système évite, par rapport aux pinces démontables classiques, de perdre ou de confondre les parties des instruments.*

- Il facile e veloce sistema di apertura / chiusura dell'asta consente la pulizia completa dello strumento, riducendo i rischi d'infezione. Questo sistema innovativo messo a confronto con le pinze per ossa compl tamente smontabili, permette di evitare lo scambio o la perdita delle singole parti dello strumento stesso.

- *Bone punches with ceramic coating have a 4 to 5 times higher surface and ensure therefore a significantly longer service life of the cutting edges.*
  This electro-physical planning provides significantly higher sliding capability, resulting in a minimum amount of abrasion as well as optimized resistance to rust and corrosion.

- Las pinzas cortantes para huesos con capa de cerámica tienen una dureza de la superficie por 4 a 5 veces superior y garantizan así una duración apreciablemente más larga del corte.
  la alizadura electrofísical se mejora considerablemente la capacidad el deslizamiento con el resultado de una abrasión mínima y una resistencia óptima contra corrosión y herrumbre.

- *la couche en céramique des pinces coupantes leur confère une duret 351 en surface 4 à 5 fois supérieure et, par conséquent, garantit une longévité accrue des lames.*
  un polissage par électrolyse garantit un meilleur glissement avec pour r 351sultat une usure minimale ainsi qu'une résistance optimale à la corrosion et à la rouille.

- Le pinze per ossa con trattamento superficiale in ceramica hanno la caratteristica di avere una durezza in superficie dalle 4 alle 5 volte superiore rispetto al modello tradizionale e garantiscono di conseguenza una durata dell'angolo di taglio di gran lunga superiore al modello non in ceramica.
  La levigatura elettrofisica oltre a garantire uno scorrimento migliore in superficie, diminuisce l'attrito, il rischio di corrosione e di ruggine.
